Dear Bob,

I am enclosing a check for \$10.00 for a Volume 2 subscription for 1979-80 year to the Arcadian for renewal from last year.

I am also interested in several other items, as follows:

(1) In responding to your survey, I would like to see (all) cheap and expensive keyboards and add-ons, preferably the bigger and better ones from Bally, but who knows when they will be produced. I talked to Bally last week, and they are still up in the air on their add-on unit. I would like you to send me details on your add-on and peripherals.

(2) For Your Information--The serial # on my unit is #8645 of Montgomery Wards Model BA-1000-2. I purchased my earlier unit in December, 1978 which failed to operate properly, but finally was given this newer model on 3/79.

(3) Please include me on the list of potential reviewers of games, etc. (see address above) as you mentioned on pg. 76.

(4) I am having trouble with the checkers game and have called the author. When a jump is made, the jumped pieces remain on the board. Also, when a piece is crown, if one reverses direction to attack, all the pieces freeze, and one must abort the game to recover the computer again (It locks up). Any suggestions?

(5) Does anyone know how to tighten the potentiometer action in the control handles, so it is less erratic with time? I have already done some handle repairs on the joystick to tighten up action so it works better.

Thank you,

Dr. Bernard H. Haberman
